How do I report product’s weight?

Product’s *net weight* is reported without packaging, instructions or attachments that are not included in the WEEE Directive. Product’s weight is reported without the weight of a battery or an accumulator included in the product. Separately sold batteries and accumulators as well as batteries and accumulators in the equipment are reported to Recser or Elker. The packaging of electrical equipment is covered by producer responsibility and is reported through Rinki Oy.

How is ‘put on the market’ defined?

Products are reported ‘put on the market’ either when they are brought to own storage/sold to wholesaler’s storage in Finland or when the products imported/produced are sold to reseller/end-user. Suitable stage to report products depends on the company’s way of business. This does not, however, have a big significance in the groups in which the circulation is very fast.
